* Confirm with dot plot and/or blood film review.

- Anemia without reticulocytosis - Likely non-regenerative anemia; consider pre-regenerative anemia.
- Increased RDW - Anisocytosis present - review blood film.
- Microcytic hypochromic anemia - Likely iron-deficiency anemia.
- Low RETIC-HGB - Decreased iron availability (consider inflammation, iron deficiency, PSS, breed-related microcytosis).

- Monocytosis - Consider inflammation (if lymphopenia, consider glucocorticoid response).
